Fabric Rafia

Applications /
railings,
bath bulkheads
shower cabins,
furniture, kitchen,
doors

...

VIDRIERA DEL
CARDONER S.A.

Glass solutions, inspired by the art of weavings.

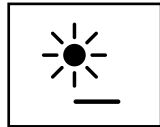

Fabric and Rafia are inspired by the art of weaving, they both create our new textile collection.

They are manufactured via a superficial application of an inorganic vitreous enamel which can be customized to any color the Ral chart upon request.

The resulting product is a highly resistant, durable, easy to clean material which can be used for indoors/outdoors applications. Depending on it's final use, it can be tempered or laminated.

inorganic vitrified
enamel glass

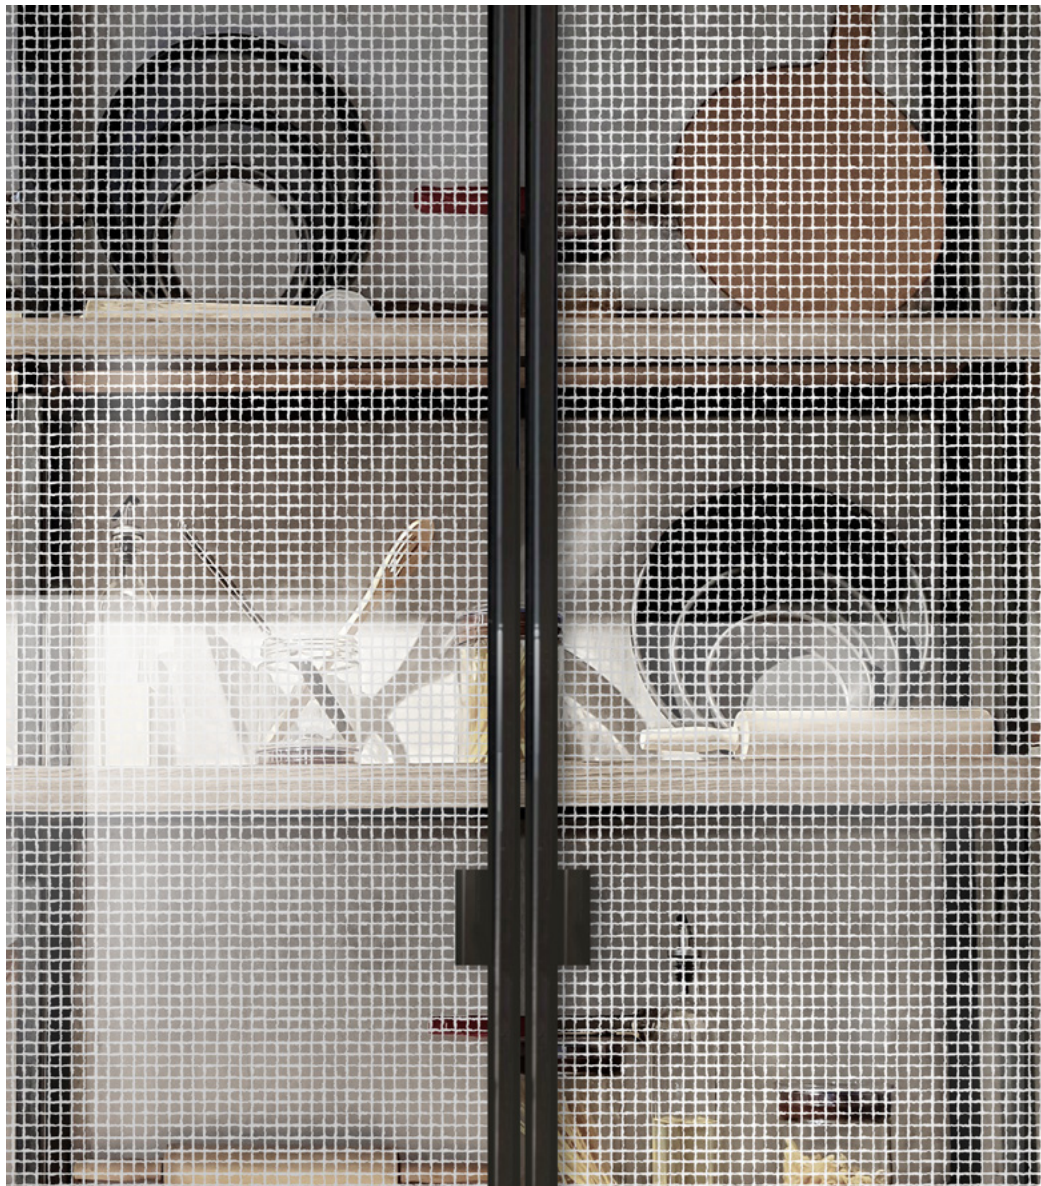

resistant
to sunlight

Our new glass textile collection is a fantastic alternative to any existing laminated glass with textile fiber inserts solutions, helping to avoid recurring issues with textile fibers, such as:

- Deformation of the inserted fabrics when suffering different tensions.
- Color variations as time goes by.
- Costly solution due to the need to temper the glass prior to lamination and challenging instalation.
- Need of two monolithic glasses to laminate the textile fibers.
